

KING AIR 200 INTERIORS FOR RFDS QUEENSLAND

Continuing their long-standing business relationship, LifePort has been selected by the Queensland Section of Australia-based Royal Flying Doctor Service to complete three (3) matching King Air 200 medical interiors. The interiors, delivered in early 2005, will be phased into service by RFDS as each aircraft is finished by a local completion center.

RFDS Queensland is one of the oldest LifePort customers, whose history with the PLUS dates back almost to its very beginning. The King Air 200 interiors, designed in collaboration between LifePort and John Williams of the RFDS, incorporate numerous components unique to the Queensland Section.

Some highlights of the RFDS Queensland medical interiors include:

- Advanced life support (ALS) PLUS on starboard-side of aircraft
- Oversized mattresses and knee-lift mechanism on primary stretchers for increased patient comfort.
- Supplemental gas outlets on outboard side of system for medical device attachment
- New dual-leg AeroSled TS Arch, for increased stability
- PLUS base unit equipped with drawers instead of standard storage bays

According to Frank Graham, VP of Sales for LifePort, “We are always fortunate to work with a customer with such a long-standing history with our company. The fact is, in most situations, RFDS Queensland knows our system better than we do. They have been operating LifePort PLUS interiors for more years than many of our employees have been with our company. This fact alone ensures that the customer is provided the exact medical interior that they require for their mission. As always, it was an absolute pleasure to work with RFDS Queensland, and we are thankful to be affiliated with such a respected organization”.
