

LIFEPORT VVIP BED

LifePort has been contracted by a large completion center in the United States for a custom VVIP bed in an A340-500 Head of State aircraft. LifePort has a long history of designing, manufacturing, and delivering world-class products for both the VIP and aeromedical industries. LifePort specializes in custom designs to meet demanding program specifications with a wide range of capabilities. The king-size bed is composed of a top and bottom frame. The top frame is used for pitch leveling in flight and the bottom frame contains the adjustment actuators. The completion center will utilize LifePort's in-house DAR to confirm the bed and incorporate it into their interior STC.

Additional highlights of the VVIP Bed include:

- Twin, variable speed, massaging mattresses
- Independent touch screen controls for each side of the bed to adjust pitch, mattresses, headrests, and footrests
- Each side of the bed has independently actuator-driven controls for position adjustment
- The lightweight, machined aluminum frame includes 3 degree leveling capability that automatically adjusts to provide a flat sleeping surface in flight
